

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. ## PREFACE.

---

**T**HE HISTORY of the race is but that of the individual 'writ large', and we do not know the real history of any age or country until we know about its characteristic men. Most of the men described are now in active business and professional careers, but a few sketches have been added of men whose achievements are still fresh in memory.

Universal history, the history of what man has accomplished in this world, is at the bottom the history of the great men who have worked here; and there can be no true criticism of a great American which is not founded upon the knowledge of his work in daily life.

This work is thoroughly National, covering every part of the United States. and puts in enduring form something of the history of great American merchants, manufacturers, builders and financiers, and other great men who have played an important part in the country's history.

This most admirable collection of contemporary biography of America's foremost leaders of life and thought will be an invaluable acquisition to the world's libraries and historical archives.

These sketches of the leaders of life and thought now at the helm of America's Ecclesiastical, Civil, Military, Industrial and Commercial lines of human activity have been selected with the greatest of care from current historical works and publications and from various other sources.

As Builders and Merchants they have built cities and illumined the marts of trade; in the field of science and medicine they have obtained great prominence; in the arena of statesmanship they have produced men of thought and men of action, while at the bar and in the administration of

## **PREFACE.**

Justice they have shown erudition and wisdom. As clergymen, educators and lecturers, they have occupied high places; and as musicians, composers, artists, authors and poets they have contributed profusely to social life.

This volume is submitted to the public in the confidence that the careers herein described will be found stimulating to patriotism; and a potent factor in cheering and inspiring the efforts of rising generations.
